SUMMARY

Results-oriented **Full-Stack Software Engineer** with **4 years of professional experience** designing, developing, and deploying **high-traffic enterprise applications** across diverse platforms.
Proficient in **front-end technologies** including **Vue.js, React.js, HTML, CSS, JavaScript, and Tailwind CSS** to build and deploy modern, responsive web interfaces. Experienced in **back-end development** using **Java (Spring Boot), MySQL, Redis, and Kafka**, capable of architecting and implementing **large-scale microservice systems**. Skilled in **cloud computing**, with the ability to **deploy full-stack applications on AWS** (frontend + backend). Currently expanding expertise in **artificial intelligence**, focusing on **machine learning and natural language processing (NLP)** through **Python** and experimentation with **LLM-based models**.
Seeking challenging entry- to mid-level software engineering roles beginning in **05/ 2026**, leveraging fast learning, technical versatility, and hands-on system-design experience to contribute immediate value in production environments.

EXPERIENCE

Truelore Beijing, China
Software Engineer Aug 2020 - 2022

- Developed backend management systems and Spring Boot–based Java microservices with MySQL, containerized services using Docker, and delivered reliable core business services for enterprise applications.
- Designed and implemented RESTful APIs, packaging and deploying services with Docker to enable consistent communication between frontend and backend microservices while ensuring data integrity.

iSoftStone Shenzhen, China
Software Engineer

- Developed mission-critical user-facing Single Page Applications (SPAs) and mobile features using **Vue.js, React.js, HTML, CSS, and JavaScript**, delivering responsive and high-performance interfaces.
- Deployed frontend services with Nginx, implementing load balancing and caching strategies to improve high-traffic application performance and reduce end-to-end latency.
- Established foundational CI/CD pipelines with **Jenkins and GitLab,** enabling automated builds, testing, and deployments while reducing manual errors.

EDUCATION

Southern Methodist University Dallas, TX

Master Degree in Software Engineer *May 2024-May2026*

- Self-studied **Python** and developed backend management systems using **Django** and Oracle
- Built and deployed a cloud-based application on **AWS**, serving a **React frontend via CloudFront and S3**.Designed the backend data layer using **MySQL on AWS RDS**, successfully launching the system to production.
- Build ML/RL models (Q-learning, DDPG, PPO) and end-to-end RAGFlow systems using Python, PyTorch, TensorFlow, vector search, and LLM deployment.Henan University of Economics and Law Zhengzhou,China

Bachelor's Degree in Science *Sep 2013 - Jun 2017*

SKILLS

Languages & Frameworks:

- TECHNICAL SKILLS Languages: **Java, Python, JavaScript, HTML CSS, Webgl,SQL**
- Frameworks/Libraries: **Spring Boot, React.js, Vue.js MySQL, Oracle,Django**
- Tools & Platforms: **Docker, Jenkins, GitLab, Linux, Nginx, Kafka, AWS**
